$$= 8 + 4 + 1$$

$$= 13$$

Question 7: (4 pts) What are the maximum positive and negative numbers that can be represented in 12 bit 2's complement form? Find the smallest positive value expressed in this form that when added to itself, the sum causes an overflow to occur.

Max Positive $= 011111111111$

$$= 2^{11} - 1$$

$$= 2047$$

Max Negative $= 100000000000$
